BRAND MANUAL

Developer, web, mobile and print identity guide

FINAL v8 Complete

Sport-neutral identity · Joomla-inspired color system · September 2026

1. Brand identity

JoomLeague is presented as a sport-neutral sports-management brand. The identity must work equally well for football, basketball, handball, volleyball, hockey, athletics, motorsport and other sports without visually privileging any one discipline.

Primary symbol

Shield + trophy + multicolor ring.
Use this symbol when the full wordmark would be too small or when a platform requires a square icon.

Core rules

- Keep the identity sport-neutral. Never introduce a ball, stadium, player, jersey or equipment from a specific sport into the core brand.
- Use the supplied logo artwork. Do not reconstruct the wordmark from ordinary text.
- For small UI sizes, use the simplified SVG variants instead of shrinking the glossy emblem indefinitely.
- Maintain sufficient clear space around the logo and symbol; avoid crowding with unrelated UI or text.

2. Logo system

Wordmark color structure

The approved wordmark color split is fixed: Joom = blue, Le = green, ag = orange, ue = red.

Joom	Le	ag	ue
#0062A9	#46B450	#F39C12	#E74C3C

Recommended variants

- Standard transparent logo: general use on light or neutral surfaces.
- Logo on dark: use the supplied dark-background treatment rather than forcing the standard artwork into low contrast.
- Monochrome white: one-color reproduction on dark surfaces.
- Monochrome black: one-color reproduction on light surfaces.
- Compact horizontal logo: constrained headers and navigation areas.

3. Color palette

	JoomLeague Blue	#0062A9	CMYK approx. 100, 42, 0, 34
	JoomLeague Green	#46B450	CMYK approx. 61, 0, 56, 29
	JoomLeague Orange	#F39C12	CMYK approx. 0, 36, 93, 5
	JoomLeague Red	#E74C3C	CMYK approx. 0, 67, 74, 9

CMYK values are approximate conversion targets for ordinary four-color printing. For color-critical production, obtain a printer-specific proof and ICC conversion.

4. Typography and UI

The logo wordmark is graphic artwork and should not be recreated with a typeface. For application interfaces and documentation, use a clear system-sans stack. The supplied developer tokens recommend Inter, Segoe UI, Roboto, Helvetica and Arial as fallbacks.

Small-icon selection

16-24 px	Outline SVG
24-48 px	Flat SVG
48 px and larger	Full emblem PNG or color SVG
CSS-colored UI	currentColor SVG

Design token files are located in developer/tokens/ and provide CSS, SCSS and JSON representations of the palette, spacing, typography recommendations, radii and icon sizing.

5. Digital applications

GitHub banner - sport-neutral abstract treatment

Platform mapping

Browser favicon	favicons/favicon.svg + favicon.ico fallback
Apple home screen	favicons/apple-touch-icon.png
Android launcher	favicons/android-chrome-192x192.png
Android adaptive	favicons/android-chrome-maskable-512x512.png
Windows desktop	developer/windows/joomleague-app-icon.ico
Linux desktop	developer/linux/joomleague-icon-256x256.png
macOS app	developer/macos/JoomLeague.icns
Joomla menu	developer/svg/joomleague-symbol-currentcolor.svg
GitHub social preview	social/joomleague-social-1200x630.png

6. Correct and incorrect use

Do

- Use official supplied files at their intended sizes.
- Use abstract, neutral visual language in banners and backgrounds.
- Use white or light variants when contrast requires it.
- Use the standalone emblem for small icons.
- Use assets.json and ASSET_USAGE.md as the machine-readable selection source for Codex.

Do not

- Do not crop the wordmark to manufacture an icon.
- Do not recolor the approved multicolor wordmark arbitrarily.
- Do not stretch, skew or rotate the logo.
- Do not add sport-specific imagery to the core brand identity.
- Do not place the dark blue Joom segment on a background where contrast is insufficient.

7. Developer and AI integration

The FINAL v8 pack is designed for deterministic use by Codex and CI. Use developer/ai/assets.json as the primary machine-readable asset map. Use developer/ai/ASSET_USAGE.md for selection rules and developer/tools/validate_brand_kit.py to verify the package after any asset change.

```
./developer/tools/ci-validate.sh
python3 developer/tools/validate_brand_kit.py --report both
```

Validation target

A releasable brand pack should finish with 0 errors and ideally 0 warnings.

8. Print and export guidance

- For ordinary office printing, use the supplied PNG or PDF manual and preserve aspect ratio.
- For professional print workflows, prefer monochrome logo assets for one-color jobs.
- CMYK conversions in this manual are approximate; final production color should be proofed by the printer.
- Do not rasterize the simplified SVG UI symbols unless the output workflow requires it.
- Keep the full logo legible; when it becomes too small, switch to the standalone emblem rather than shrinking the wordmark further.

Asset pack structure

The package includes logos, icons, favicons, platform-specific app icons, banners, social graphics, integration examples, design tokens, validation tools, CI workflow and AI selection metadata.
